

Project Initialization and Planning Phase

Date	29 September 2026
Team ID	UNM123APEXLAB
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	3 Marks

Define Problem Statements (ComicCraft Customer Problem Statement):

ComicCraft is a web-based application, built with FastAPI and Google's Gemini models, that generates personalized comic stories and illustrations from a user's prompt. Many people have story ideas but lack the writing, drawing or technical skills to turn them into a finished comic. The problem statements below capture the point of view of the users ComicCraft is built for, so the team can design a solution that removes these barriers and lets them create comics with a single prompt.

Customer Problem Statements (PS-1 to PS-4):

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A student or hobbyist with a story idea.	Turn my prompt into a complete comic with story and illustrations.	I can't write the panel script or draw the artwork myself.	Comic creation needs both storytelling and illustration skills.	Frustrated; my idea stays unshared.
PS-2	A teacher or content creator.	Create personalized comic stories for my lessons and audience.	Generic templates and stock art don't match my topic.	Existing tools can't generate a custom story and images from my own prompt.	Disappointed and short on time.
PS-3	A user of AI story tools.	Get panel images that stay consistent with the story.	Characters and scenes change from panel to panel.	Story text and images are generated separately, without shared context.	Dissatisfied with the quality.
PS-4	A non-technical user.	Generate a comic just by typing a prompt on a web page.	Existing AI tools need many steps and technical setup.	Story and image generation are not offered together in one simple app.	Overwhelmed; I want a quick, simple experience.
