

Empathy Map

Date	29 September 2026
Team ID	UNM123APEXLAB
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	4 Marks

Empathy Map

This empathy map shows how a typical ComicCraft user, a student or hobbyist storyteller, experiences the problem of turning a story idea into an illustrated comic. It captures what they Say, Think, Do and Feel while creating comics without art or scripting skills, helping the team build an AI solution that generates a story and illustrations from a single prompt.

SAYS - I have a great story idea, but I can't draw it myself. - Writing every panel by hand takes too long. - I wish I could just type a prompt and get a comic.	THINKS - Will the AI keep my characters looking the same in every panel? - Do I need technical skills to use this? - Will the story match what I imagined?
DOES - Searches for comic makers and drawing tutorials online. - Sketches rough ideas and drafts the story script on paper. - Tries AI tools, then edits or regenerates the results.	FEELS - Frustrated by the lack of art and scripting skills. - Excited by the idea of AI-made comics. - Worried about inconsistent images and story quality.
